## Software update Gear Tronic II

A new software version (version: 1.069) for the Gear Tronic II device is now available. The following improvements have been implemented into the software:

- the vehicle database has been updated
- additional languages have been added (Hungarian and Romanian)
- specifications of automatic transmission oils have been updated
- new automatic transmission oils have been added
- type of automatic transmission oil has been added to printing options
- printer settings have been optimized

To ensure optimal and trouble-free operation of the device, please install the software updates provided by us on a regular basis.

**Note:** For vehicles with gear oil thermostats, be sure to flush the gear oil only after the thermostat has opened. The inlet and outlet pressure of the Gear Tronic II should be taken into account here. The pressures should be almost the same.

Below you will see how to install the new software:

### Download

#### Step 1

The new software can be downloaded via

<https://www.liqui-moly.com/en/gb/products/service-in-partner-workshops/gear-tronic-ii.html>

or by following the steps shown below.

The screenshot shows the LIQUI MOLY website interface. The URL in the browser is [liqui-moly.com/en/gb/](https://www.liqui-moly.com/en/gb/). The navigation menu includes 'Company', 'Products', 'Press', and 'Contact'. The 'Products' menu is expanded, showing categories such as 'Areas of use', 'Product groups', and 'Mediacenter'. The 'Gear Tronic II' option is highlighted in the 'Mediacenter' section. There are also promotional banners for 'Oil guide' and 'Tips & Topics'.

# Technical Information

## Step 2

Scroll down to find the attached download file.

The screenshot shows the LIQUI MOLY website page for Gear Tronic II partner workshops. The page includes a navigation menu with 'Company', 'Products', 'Press', and 'Contact'. A central image shows a blue and grey Gear Tronic II device. Below the image, there is a section titled 'Further Services' with two download links: 'Update instructions softwareupdate Gear Tronic II (PDF, 2 MB)' and 'Softwareupdate Gear Tronic II (V 1.069) (ZIP, 19 MB)'. The second link is circled in red.

## Data transfer

1. Unpack the ZIP compressed files.
2. Copy the unpacked folder "ATX" to an empty USB stick (FAT32 formatted) with a maximum of 3 GB memory.

## Installing the update

1. Switch off your Gear Tronic II device.
2. Connect the USB stick on the back of the device to the corresponding USB port.
3. Switch your Gear Tronic II device on again.
4. Confirm on the screen that you want to start the update.
5. Please do not switch off your device as long as the software update is being installed. The screen turns completely black for a few seconds during the update. Please wait until the screen returns to the main menu.
6. You can then remove the USB stick. The software is now up to date.
